

Let it be known that this is not right. I pay for a service that provides quality service and its not the right of the government to take anything away thats not illegal. I chose to go with XM as my service provider because i can get up to date traffic and weather conditions without having to listen to mindless chatter. In the days before XM Radio i wouldnt even listen to the radio in the mornings so what would it harm if they broadcast that info. I bet you have the same thing in your car.
